

Securing Your New Home

When moving into a new house, how can you be certain who can see the existing security, who has an old key, a passcode, or worse camera access on their phone?

Understanding the Risks:

Accordant Global Partners recommends a complete audit of the existing security prior to moving in. Making certain, your personal information is not getting into the hands of someone you do not know and ensuring the security of your new house is an effective balance between structural, privacy and technology.

Prevention: What We Look for During the Audit

- Physical threat and risk assessment of the existing property and its security system.
- Vulnerability assessment of property, looking at access points into the property such as gates, driveways, fences, and walls
- Analysing the intrusion detection sensors, alerting the presence of people around the property's perimeter and close to the house.
- Looking for NDAA approved CCTV with smart analytic software that provides live and taped feeds of perimeter areas.
- Scoping the design of systems, sighting of systems including schematics and specific system specifications.
- Ensuring there are multiple networks for all services in case one is infiltrated.
- Windows and doors – all of which should be “hardened” with locks, bullet proof glass and or bars to provide enhanced protection from home invasions.
- Safe rooms with reinforced doors and walls, communication equipment to call for help, first aid, etc.
- Backup power: Much of the technology used for protection depends on electricity to function. Backup power in case of power outages due to natural causes or perpetrated by hostiles.

Who We Are

Accordant Global Partners (AGP) is a Risk Management Advisory firm. We are a global network of risk professionals serving some of the most prominent families, corporations and business leaders in the world.

We do this across **Five Pillars of Protection and Risk Management.**

1. Cyber, Digital and Technology Risk.
2. Physical Risk (People and Physical infrastructure).
3. Travel Risk.
4. Medical Risk.
5. Bespoke Risk: this includes key areas which deserve special attention such as kidnap, trusted insider, crisis management and espionage.
